Under the silky touch surface, it contains rich texture, gorgeous without reducing connotation, shining without losing elegance, exclusive dedication, expensive and rare.

在那丝滑触感的表面下蕴涵丰富的肌理，华丽而不减内涵，光耀却不失雅致，独家奉献，贵乎稀有。

CARINA adopts advanced technology to form multiple nano and micron ultrastructure on the coating surface during the drying film-forming process, so that it has strong hydrophobic performance. It can not only make the dust particles adhere to the coating surface in a suspended state, but also greatly increase the contact surface between water and the coating surface, which is conducive to the rolling of water droplets on the coating surface to achieve the purpose of self-cleaning.

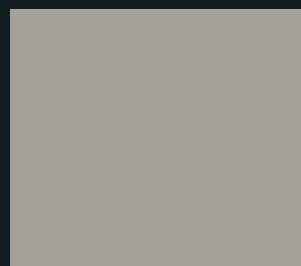

卡瑞纳的研发具有仿生学原理，根据“荷叶自洁效应”使涂料在干燥成膜过程中，在涂层表面形成多重纳米和微米级的超微结构，使其具有强劲的疏水性能，既可以使灰尘颗粒附着在涂层表面呈悬空状态，又能使水与涂层表面的接触面大大增加，有利于水珠在涂层表面的滚落达到自洁的目的。

After natural drying at room temperature for 5 minutes, a nano transparent layer can be formed on the surface, and water forms droplets on the material surface, which is self-cleaning, waterproof, anti-corrosion and anti-oxidation, so as to truly brush and live immediately.

常温自然干燥 5 分钟即可在物体表面形成一层高密度光滑的纳米超疏水透明层，从外观上看水在该材料表面会形成球形水珠，自清洁、防水、防腐、抗氧化，使得本产品适用于各种家居环境，真正做到即刷即住。
